SUMMARY

Software Engineering undergraduate currently pursuing a BSc (Hons) in Software Engineering degree at SLIIT (Graduating 2027) with Hands-on experience developing web and mobile applications using Java, Python, Node.js, React.js, and React Native. knowledge of REST APIs and database integration with continuous exposure to full-stack and machine learning academic projects. Seeking a Software Engineering Internship to apply academic knowledge in building practical, scalable solutions.

PROJECTS

E-Waste Management System – Truck Management Module (Web Application)

Jan 2025

Tech Stack: React.js, Node.js, Express.js, MongoDB (MERN Stack)

- Developed a truck management module to schedule, track, and manage vehicle utilization for efficient e-waste collection.
- Built responsive front-end components using React.js for real-time data interaction.
- Implemented RESTful APIs with Node.js and Express.js to handle truck allocation and status updates.

Hospital Management System - Doctor & Prescription Module (Web Application)

Jan 2024

Tech Stack: Java, MS SQL

- Streamlines the administration of medical professionals. tracking of doctors availability, and managing their profiles.
- Enables doctors to efficiently prescribe medications for individual patients and access comprehensive patient history

Smart Health – Medical Record Management Module Developer (Mobile Application)

June 2025

Tech Stack: React Native, Node.js, MongoDB, REST API, Git

- Developed a medical record management module enabling staff to retrieve patient history and update vital information securely.
- Implemented digital card scanning with voice command support for both registered and unregistered patients, improving patient identification workflow.
- Applied SOLID principles to design maintainable and scalable components.
- Achieved 80% unit test coverage using automated testing to ensure reliability and reduce defects.
- Collaborated in an Agile-based development environment with version control using Git.

Vehicle Fuel Consumption Predictor

Nov 2025

Tech Stack: Python, Scikit-learn, Pandas, NumPy, UI Development

- Built a predictive application to estimate vehicle fuel consumption based on user inputs such as vehicle type, fuel type, engine size, distance, and load.
- Trained a Random Forest Regression model on a sample dataset to generate consumption predictions.
- Performed data preprocessing, encoding, and feature scaling to prepare data for model training.
- Designed a modern user interface for input collection and real-time prediction display.
- Implemented data validation and business logic to solve resource allocation and prediction problems.

EDUCATION

Bachelor of Information Technology - specialization in software engineering

June 2023 - present

Sri Lanka Institute of Information Technology - SLIIT [Malabe]

- Expected Graduation: 2027 | Current GPA: 3.6/4.0

CERTIFICATIONS

- Dean’s List certificate - 1st Year 2nd Semester - SLIIT
- Dean’s List certificate - 2nd Year 1st Semester - SLIIT
- AI/ML Engineering stage 1 - SLIIT
- AI-Powered A/B Testing - SoloLearn
- MongoDB Node.js Developer Path - MongoDB University
- Generative AI in practice - Coursera
- Agile Project Management - HP LIFE
- Data Science & analytics, Vibe Coding - SoloLearn
- 3 stages Passed Finalist - AAT - Jan 2022

TECHNICAL SKILLS

- Programming Languages: Java, Python, JavaScript, C++, Kotlin
- Web & Mobile Development: React.js, React Native, Node.js, Express.js, Spring Boot, HTML, CSS
- Databases: MongoDB, MySQL, Microsoft SQL Server
- Tools & Testing: Git, JIRA, Postman, Selenium WebDriver, Jest
- Data & AI: Pandas, NumPy, Data Preprocessing, Prompt Engineering

Languages: English (Professional Proficiency), Sinhala, Tamil
